Mini Rotary Actuator *CRJ Series*

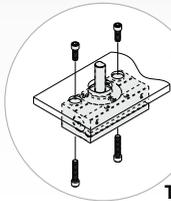

Rack & Pinion Type/Size: 05, 1

Flexible mounting

A new compact body design not only reduces overall space requirements, but also achieves space-savings in wiring and piping. Ease in mounting is maximized thanks to the merits of the new compact body.

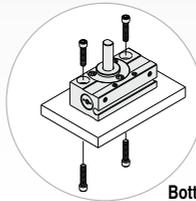

■ Free mounting

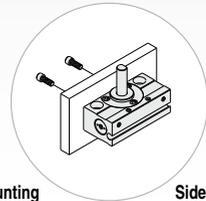

Top mounting

Speed controllers do not protrude from the top of the body.

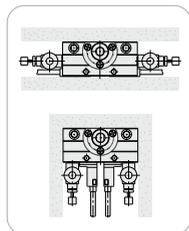

Bottom mounting

Side mounting

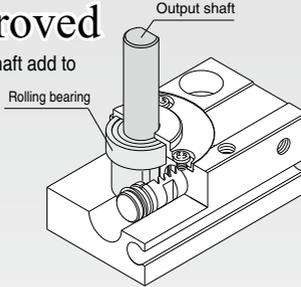

■ Wiring and piping direction can be selected depending on mounting conditions.

Mounting examples for auto switch and speed controller

Allowable load improved

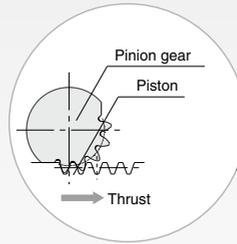

Large roller bearing and large diameter output shaft add to overall compactness while ensuring high rigidity.

Model		CRJ05	CRJ1
Allowable load (N)	Fr	25	30
	FS (a)	20	25
	FS (b)	20	25
Output shaft size (mm)		ø5	ø6

Backlash reduced

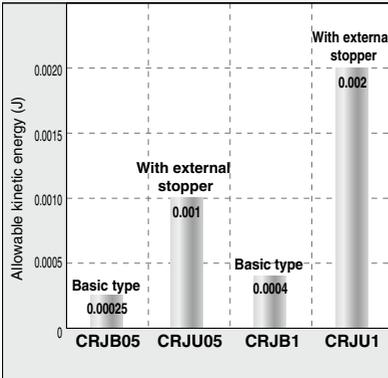

Even with a single rack design, the use of a special construction minimizes backlash.

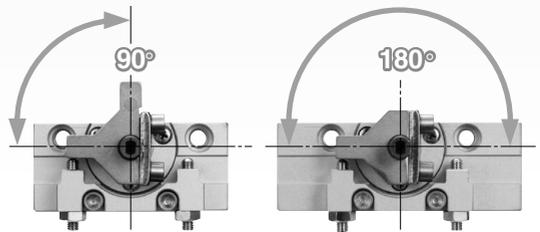

Stopping the pinion gear by having it strike against the flat surface of the piston eliminates backlash.

■ With external stopper/CRJU Series

4 to 5 times allowable kinetic energy (Basic type compared to CRJB)

Angle is adjustable: $\pm 5^\circ$ at each rotation end

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to [the IDK series in the Best Pneumatics No.6.](#)

Additional Reminders

1. Enter the dimensions within a range that allows for additional machining.
2. Unless indicated otherwise, the dimensional tolerance conforms to the general tolerance. SMC will make appropriate arrangements.
3. The length of the unthreaded portion is 2 to 3 pitches.
4. Unless specified otherwise, the thread pitch is based on coarse metric threads. M3 x 0.5, M4 x 0.7
5. Enter the desired figures in the [] portion of the diagram.
6. Chamfer face of the parts machining additionally is C0.5.
7. The additionally machined port will have an aluminum surface since it is left unfinished.

Specific Product Precautions

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 4 to 14 for Rotary Actuator and Auto Switch Precautions.

Rotation Adjustment

⚠ Caution

As a standard feature, the actuator with external stopper is equipped with a rotation angle adjustment screw that can be used to adjust the angle of rotation.

Size	Angle adjustment per single rotation of angle adjustment screw
05	2.3°
1	2.3°

The rotation adjustment range for the actuator with external stopper is $\pm 5^\circ$ at each rotation end. Please note that adjusting beyond this range, may cause product malfunction.

Mounting of Speed Controller and Fittings

⚠ Caution

The M3 x 0.5 piping port is used. In case the speed controller or fittings are directly connected, use the series listed below.

- Speed controller
 - AS12□1F/Elbow type
 - AS13□1F/Universal type
- One-touch fitting
 - One-touch mini KQ2 series
- Reducer bushing M3 series

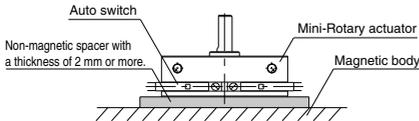

Mounting of Auto Switch

⚠ Caution

If a size 05 actuator with auto switch is being used, keep the magnetic body away at least 2 mm or more from the bottom of the actuator.

If the magnetic body comes closer than 2 mm, malfunction of the auto switch may occur due to the magnetic force drop.

* When using the bottom face for mounting, a non-magnetic spacer (such as aluminum) is required as shown below.

Maintenance

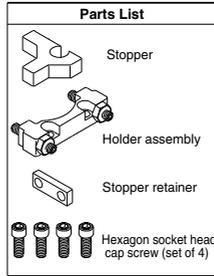

⚠ Caution

This product requires special tools; therefore, it cannot be disassembled for maintenance.

External Stopper Unit

⚠ Caution

Order external stopper unit with the unit part numbers shown below.

Model	Unit part no.
CRJU05-90	P531010-1
CRJU05-180	P531010-2
CRJU1-90	P531020-1
CRJU1-180	P531020-2

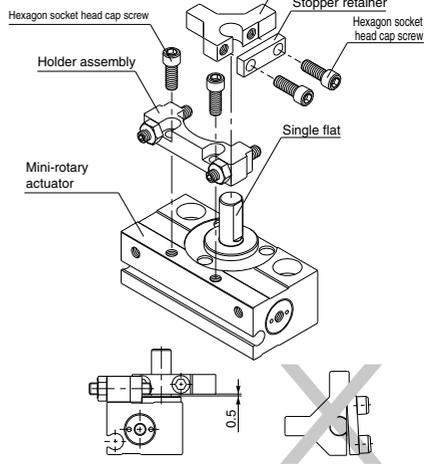

Note 1) External stopper units for 180° cannot be applied to the 90° Mini-rotary Actuators.

Note 2) When using external stoppers for 90°, use Mini-rotary Actuators with a rotation range of 100°, and for 180°, use actuators with a rotation range of 190°.

External Stopper Assembly Procedure

* Actuators with external stopper (Model CRJU) come already assembled; therefore, the following procedure is not required.

⚠ Caution

1. Assemble the stopper retainer to the stopper temporarily. Then place the stopper retainer in the single flat position and tighten with hexagon socket head cap screws. Leave a space of approximately 0.5 mm between the stopper and the Mini-rotary actuator, as shown in Fig. (1).

Tighten the hexagon socket head cap screws evenly so that the stopper retainer is not unevenly tightened as in Fig. (2). Furthermore, take precautions to avoid applying excessive force to the shaft when tightening.

2. Tighten the holder assembly with hexagon socket head cap screws.

	Tightening torque (N·m)
Hexagon socket head cap screw	0.8 to 1.2
